

Unverified Marks: 2 / Verified: 2 / Verified with Deductions: -25 / Verified with Deductions & Milestones: -25					Confirm	Completed	Points	Required?	Maybes	Yes Marks	Yes with Deductions	Required Deduction: -3
1. Product Administration												
<i>As an administrator I should be able to:</i>												
	1.1	Gain access to an admin dashboard by providing a username and password.				No	2.0	★	0	0	-3	
	1.2	Add, edit or delete product listings by way of an admin dashboard.				Yes	2.0	★	2.0	2.0	2.0	
		- Your database must include at least 10 products.			Yes							
		- These products must have real names and actual descriptions, no key mashing. (Faker generated content is allow.)			No							
	1.3	Add or update images associated with a new or existing products. (Or images for another suitable model.)				No	2.0		0	0	0	
	1.4	Edit the content of the website's contact and about page.				No	2.0		0	0	0	
		- Theses pages must be editable from a web-form from within the activeadmin part of your site.			No							
		- Editing of these pages must not be handled by CRUD actions/views scaffolded using "rails g scaffold".			No							
		- These pages must also have their own "show" pages where regular users can view their content.			No							
	1.5	Create and maintain a list of product categories and assign categories to new or existing products.				No	2.0		0	0	0	
<i>As the website programmer you should be able to:</i>												
	1.6	Write a seed script to populate your product database with products and associated categories.				No	2.0		0	0	0	
		- You must seed at least 100 products across 4 categories. (Faker can be used for this.)			No							
	1.7	Scrape your seed data for products and categories from a 3rd party website using a web scraping tool or custom scraping script.				No	2.0		0	0	0	
	1.8	Extract your seed data for products and categories from an existing dataset or API.				No	2.0		0	0	0	
		Uses at least one CSV or API (not faker)			No							
2. Product Display												
<i>As a customer I should be able to:</i>												
	2.1	Navigate through the available products by way of a front page.				No	2.0	★	0	0	-3	
	2.2	Navigate through the available products by category.				No	2.0		0	0	0	
		- Customers can navigate to a particular category and see all the products that belong to that category.			No							
		- Your solution to this requirement should be different from your solution to feature 2.6.2 (search by category).			No							
	2.3	View the details of any of the available products on their own product page.				No	2.0	★	0	0	-3	
	2.4	Filter the displayed products in two of the follow manners:				No	2.0		0	0	0	
		- Display only products that are on sale.			No							
		- Display only products that are "new", where "new" means having been added to the site within the past 3 days.			No							
		- Display only procts that have been "recently updated", where "recently updated" means having been updated within the past 3 days.			No							
		- Note: New products should not be displayed on in the recently updated list if you implement both of those filters.			No							
	2.5	Products listing are paginated.				No	2.0		0	0	0	
		- Be sure to use the Kaminari gem for this as the will_paginate gem conflicts with Active Admin.			No							
	2.6	Search through the available products using a keyword search by category.				No	4.0	★	0	0	-3	
		- User should be able to search for products by keyword.			No							
		- Found products will contain the keyword somewhere in the product title or description.			No							
		- When searching the user will be able to select a category (or other relevant association) from a dropdown list.			No							
		- If a category is selected the search results will be restricted to products belonging to the selected category.			No							
		- There should still be a way to search through all products regardless of category.			No							
		- Your solution to this requirement should be different from your solution to feature 2.2 (navigate by category).			No							
3. Product Orders												
<i>As a customer I should be able to:</i>												
	3.1.1	Add various products to a shopping cart saved in session.				No	4.0	★	0	0	-3	
	3.1.2	Edit quantity of items in shopping cart and remove items from cart.				No	4.0		0	0	0	
		- User can change the quantity associated with an item using a textfield or some up/down buttons.			No							
		- User can remove items from shopping cart.			No							
		- Remove functionality must be independent of quantity editing.			No							
	3.1.3	Complete a checkout process after filling their shopping cart, including:				No	8.0	★	0	0	-3	
		- Display of an invoice for product(s) the customer wishes to purchase which includes taxes.			No							
		- If customer's address is unknown they can provide their address, or at minimum their province.			No							
		- PST, GST and HST used in the invoice must depend on the user's province.			No							
		- The user's order and address details are saved to the orders and customers tables.			No							
		- The entry in the orders table is associated with the customer's entry in the customers table.			No							
	3.1.4	Sign up for an account with a username and password so that my address details can be saved to simplify future orders.				No	8.0		0	0	0	

Unverified Marks: 2 / Verified: 2 / Verified with Deductions: -25 / Verified with Deductions & Milestones: -25				Confirm	Completed	Points	Required?					
		- Customer account should be implemented in a secure manner, with passwords being saved to the database in a hashed and salted format. It's recommend that you research and use the Devise gem for this.		No								
		- Once a customer has created an account there should be a way for the user to login using their password.		No								
		- Users should remain logged in until they log out and/or close their browser.		No								
		- It is recommended that you use the devise gem to implement the login functionality, rather than rolling your own custom implementation.		No								
		3.1.5 Save their address details (including province) during or after account sign-up.			No	4.0		0	0	0		
		- During the signup process or once logged in a user must be able to add their address including a province.		No								
		- The customer's province should be added to the user table by way of a foreign key to a provinces table.		No								
		<i>As a customers or an administrator I should be able to:</i>										
		3.2.1 List all past orders orders along with the order details. Can be implemented either for customer or administrator as follows:			No	4.0		0	0	0		
		- As a customer: There must be some way to review customer's past orders showing which products were ordered, taxes and grand total.		No								
		- As an admin: Your admin backend must include some way to list all the customers who have associated orders along with a list of products ordered, the taxes, and the order grand total.		No								
		- As an admin: This feature should not include manually looking up orders or customers or products by navigating to other pages.		No								
		<i>As an administrator with customers who can submit orders I should be able to:</i>										
		3.2.2 Manually and programmatically change the status of outstanding orders as required.			No	2.0		0	0	0		
		- You must have already implemented a checkout process (3.1.3) with credit card payment processing (3.3.1).		No								
		- Order status should have at minimum three possibilities: new, paid, shipped.		No								
		- Your order status must be switch from unpaid to paid once the 3rd party credit card processor confirms the payment.		No								
		- Flagging an order as shipped can be done manually using your admin dashboard.		No								
		3.2.3 Change the tax rates associated with the various Canadian provinces and territories.			No	2.0		0	0	0		
		- You must have already implemented a checkout process (3.1.3).		No								
		- Your database must include all provinces and territories with the correct tax rates set for GST, PST and HST.		No								
		<i>As the website programmer you should be able to:</i>										
		3.3.1 Integrate a 3rd party payment processor such that you can accept credit card payments as part of the checkout process.			No	6.0		0	0	0		
		- It is recommended that you use Stripe or Paypal for payment integration. Ask for instructor permission to use something else.		No								
		- Your payment integration should be running in a test or "sandbox" mode so that you don't have to transfer actual funds.		No								
		- After the payment has been confirmed by your payment integration service you need to order the order as paid in some manner.		No								
		- There must be some way to associate paid orders with payments listed by your payment integration service. Example: Saving a stripe payment id in your orders table.		No								
		3.3.2 Design the database schema such that changes to product prices or changes to tax rates will not affect past orders.			No	2.0		0	0	0		
		- You have denormalized your database such that product prices and tax rates are "backed up" in some way associated with your order.		No								
4. Layout and Application Design												
		<i>As the website designer you should be able to:</i>										
		4.1.1 Create valid markup for all pages on the website.			No	2.0		0	0	0		
		- This feature is only available for marking during your final marking session.		No								
		- The HTML included in all of your pages validates according to the W3C Validator.		No								
		4.1.2 Design a consistent look and feel for all pages on the website.			No	4.0		0	0	0		
		- This feature is only available for marking during your final marking session.		No								
		- Your design need not be complex, but all aspects of all your pages must be professionally styled in some way.		No								
		- Your design must be polished to the point that your instructor would trust the site with their credit card were it a real store.		No								
		4.1.3 Implement navigation breadcrumbs up to three levels of depth.			No	2.0		0	0	0		
		- Breadcrumbs should be "location based" with depth levels as described in this link.		No								
		- Breadcrumbs should not be implemented using cookies or session.		No								
		- Breadcrumbs should highlight the navigation through an association like products and categories.		No								
		4.1.4 Make use of Rails "View Partials" to optimize the ERB views used for the website.			No	2.0	★	0	0	-3		
		4.1.5 Use the SCSS pre-processor for all styling rules instead of CSS.			No	2.0		0	0	0		
		- Your SCSS must include the use of nesting, variables, inheritance and operators.		No								
		4.1.6 Build your markup and styling around a CSS framework like Bulma, Materialize, Tailwind, Foundation, Semantic or Bootstrap.			No	2.0		0	0	0		
		- This feature is only available for marking during your final marking session.		No								
		- Your design includes a framework-based response menu navigation component.		No								
		- Your design must be built around your framework's responsive grid system.		No								
		4.1.7 Your CSS is screen-size responsive such that your store works equally well on desktop, tablet and mobile devices.			No	4.0		0	0	0		
		- This feature is only available for marking during your final marking session.		No								

Unverified Marks: 2 / Verified: 2 / Verified with Deductions: -25 / Verified with Deductions & Milestones: -25					Confirm	Completed	Points	Required?					
		- You must have already obtained 4.1.2 (consistent look and feel) and 3.1.3 (order checkout) for this feature to be available.			No								
		- Various aspect of your website must reconfigure themselves to accommodate devices with various screen sizes.			No								
		- All aspects of your store including the menu and shopping cart must be useable and must look polished for both desktop and mobile devices. (Demo with mobile device or browser dev tools.)			No								
		- You must be able to demo to your instructor that your full checkout process is useable and looks polished for both desktop and mobile devices. (Demo with mobile device or browser dev tools.)			No								
	4.2.1	Use Rails validations in your models to ensure that data submitted to the site by administrator and customers is present and correctly formatted.				No	2.0	★	0	0	-3		
		- All models (except join models) must include validations for all model properties.			No								
		- All model properties must include validations specific to their datatypes. For example, numeric properties must have an is_numeric validation.			No								
	4.2.2	Implement a database schema that involves both one-to-many and many-to-many relationships.				No	2.0		0	0	0		
	4.2.3	Make use of a custom flash hash message and use the session hash in some way.				No	2.0		0	0	0		
	4.2.4	Implement file uploads in such a way to support the automatic scaling of images into multiple sizes for use within your views.				No	2.0		0	0	0		
	4.2.5	Implement a many-to-many relationship with a join table/model along with a way work with this association in the admin dashboard without directly manipulating the join table.				No	2.0		0	0	0		
		- For example: When editing a product you can add or remove multiple "tags" or "categories". (Follow link for more details.)			No								
5. Source Control, Deployment, Testing, and Dependency Management													
	As the website programmer you should be able to:												
	5.1	Use git and github to keep your source under control with the ability to push from master to origin. 32 commit and 3 branch minimum.				No	4.0	★	0	0	-3		
		- Your local git repository must be linked to a remote github repo.			No								
		- All 32+ of your commits should be spread out over the entire project timeframe.			No								
		- All commits messages should be descriptive of the actual committed changes.			No								
		- You must show that at least two features were developed in their own branches and merged into master.			No								
		- Be prepared to review your commit messages and the commit deltas with your instructor. You should know how to review both.			No								
	5.2	Project implements image uploads using ActiveStorage or a gem like Carrierwave.				No	4.0		0	0	0		
	5.3	Active Storage uploads are stored to Google Cloud or AWS S3.				No	4.0		0	0	0		
	5.4	You have installed the Rubocop gem and when run it lists no offenses for the code that you personally wrote.				No	4.0		0	0	0		
		- This feature is only available for marking during your final marking session.			No								
		- You should follow the setup and configuration instructions available at this link.			No								
	5.5	Using an end-to-end testing solution like Cypress you've written tests for your sign-up/login or cart/checkout features.				No	4.0						
		- Your tests must cover the sequence of user interactions required to a) sign-up/login or b) fill up a shopping cart, modify cart, & check out.			No								
		- The features under test must be complete and verified by your instructor.			No								
		- Tests must cover both the happy path and any potential unhappy paths.			No								
		- Example: The sign-up/login happy path means all forms are completed/submitted without triggering validation errors.											
		- Example: One possible unhappy path for login would show that users receive appropriate feedback when logging in with incorrect credentials. There are also a number of unhappy paths related to sign-up.											
	5.6	You can deploy your store to a cloud system like Heroku or AWS, or a VPS like Digital Ocean.				No	6.0		0	0	0		
		- You need to have accumulated at least 40 marks for this feature to be available.			No								
		- All aspects of your project (aside from image uploads on Heroku) must function properly once deployed.			No								
		- Your deployed database must be seeded with at least 10 products and 4 categories. Associated product images must also be present.			No								
	5.7	You've containerized your app using Docker and can launch this container locally.				No	4.0		0	0	0		
		- You need to have accumulated at least 40 marks for this feature to be available.			No								
		- All aspects of your project must function properly once deployed. (See feature ? as the one exception.)			No								
		- Your deployed database must be seeded with at least 10 products and 4 categories. Associated product images must also be present.			No								
	5.8	You've containerized your app using Docker and you've configured a remote server (or a cloud service) to host your containerized app.				No	4.0		0	0	0		
		- You need to have accumulated at least 40 marks for this feature to be available.			No								
		- All aspects of your project must function properly once deployed. (See feature ? as the one exception.)			No								
		- Your deployed database must be seeded with at least 10 products and 4 categories. Associated product images must also be present.			No								
		- Your project container must be accessible via the internet by domain or direct ip.			No								
		- If deployed to a VPS, a reboot to the server should result in the containerized app automatically running without manual intervention.			No								
6. Interesting and Inventive Additions													
	As the website programmer you have integrated an interested 3rd party service, tool, or library: (Worth 4% to 8%. See Full Project Explanation Doc.)												
	6.1	Your store incorporates one of the following services, tools, libraries in a novel way:				No			0	0	0		

Unverified Marks: 2 / Verified: 2 / Verified with Deductions: -25 / Verified with Deductions & Milestones: -25				Confirm	Completed	Points	Required?						
			- Discord by way of a Discord Bot (Using DiscordRB)	No									
			- Twilio for Voice or Text Messages (Using Twilio-Ruby)	No									
			- Social Media Bot for FB, Insta, Twitter, etc.	No									
			- A CI/CD workflow using Github Actions (or with Gittlab)	No									
			- An email sending API like MailGun.	No									
			- Some other cool and inventive use of an API or service. You must ask for instructor approval first, please.	No									
7. Project Management													
			<i>As the project manager you should be able to:</i>										
			7.1 Complete and submit the project proposal and review this document via video chat with your instructor.		No			0	0	0			
			7.2 Meet or exceed the milestone goals listed below:										
			- Verified project mark of 15+ obtained during or before Week 11	No								Milestones	
			- Verified project mark of 30+ obtained during or before Week 12	No								0	
			- Verified project mark of 45+ obtained during or before Week 13	No								0	
			- Verified project mark of 60+ obtained during or before Week 14	No								0	
			- Verified project mark of 80+ obtained during or before Week 15	No								0
